Notes: Scientific nomenclature follows Hickman (1993) and Flora of North America Flora Committee (1993-2007). **Bold** typeface indicates taxa supported by voucher specimen(s) deposited in a public California herbarium.

An \* indicates non-native taxa that have become naturalized or persist without cultivation.

An + indicates ornamental or agricultural plant species that are actively cultivated.

Common names follow Abrams and Ferris (1960), Hickman (1993), Niehaus and Ripper (1976), and DeGarmo (1980).

Checklist is based on Gordon True's 1973 "The Ferns and Seed Plants of Nevada County, California", my 20 March 1993 and 19 February 2008 field observations, and the Friends of Spenceville's checklist.

# Checklist of Vascular Plants of Spenceville Wildlife Area, Nevada and Yuba Counties, California

By David L. Magney

---

Scientific Name	Common Name	Wetland		Family
		Growth Habit	Indicator Status	

---

Growth habit definitions:

AF = annual fern or fern ally.	PG = perennial grass or graminoid.
AG = annual grass or graminoid.	PH = perennial herb.
AH = annual herb.	PV = perennial vine.
AV = annual vine.	S = shrub.
BH = biennial herb.	T = tree.
PF = perennial fern or fern ally.	

Wetland indicator status (Reed 1988):

OBL = obligate wetland species, occurs almost always in wetlands (>99% probability).  
 FACW = facultative wetland species, usually found in wetlands (67-99% probability).  
 FAC = facultative species, equally likely to occur in wetlands or nonwetlands (34-67% probability).  
 FACU = facultative upland species, usually occur in nonwetlands (67-99% probability).  
 + or - symbols are modifiers that indicate greater or lesser affinity for wetland habitats.  
 NI = no indicator has been assigned due to a lack of information to determine indicator status.  
 \* = a tentative assignment to that indicator status by Reed (1988).  
 A period "." indicates that no wetland indicator status has been given in Reed (1988).  
 Parentheses around an indicator status indicates the wetland status as suggested by David L. Magney based on extensive field observations.
