Notes: Scientific nomenclature follows Hickman (1993) and Flora of North America Committee (1993-2007).

Common names follow Abrams & Ferris (1960), Niehaus & Ripper (1976), DeGarmo (1980), and Weeden (1986).

An "*" indicates non-native species which have become naturalized or persist without cultivation.

Names in **bold typeface** indicate species rare in Ventura County (Magney 2007).

Habit definitions:

AF = annual fern or fern ally.	PG = perennial grass or graminoid
AG = annual grass or graminoid	PH = perennial herb.
AH = annual herb.	PV = perennial vine.
BH = biennial herb.	S = shrub.
PF = perennial fern or fern ally.	T = tree.

Wetland indicator status (Reed 1988):

OBL = obligate wetland species, occurs almost always in wetlands (>99% probability)

FACW = facultative wetland species, usually found in wetlands (67-99% probability).

FAC = facultative species, equally likely to occur in wetlands or nonwetlands (34-67% probability).

FACU = facultative upland species, usually occur in nonwetlands (67-99% probability).

+ or - symbols are modifiers that indicate greater or lesser affinity for wetland habitats.

NI = no indicator has been assigned due to a lack of information to determine indicator status.

* = a tentative assignment to that indicator status by Reed (1988).

A period "." indicates that no wetland indicator status has been given in Reed (1988).

Parentheses around an indicator status indicates the wetland status as suggested by David Magney.
